# INTERNATIONAL CONSULTANCY FOR FINANCE AND ECONOMICS

Intelligent Cathedral Lda is an organization aiming at promoting the universal values in the digital age, interacting with communication leaders and today's world leaders. It proposes to plan and transmit new economic models and new practices on the universal "Common Good", on the social economy in a perspective of Integral Ecology and enhancement of biodiversity.

IC has spread various collaborative forms on topics such as economics, international cooperation, training, communication in its various forms with various Governments, Corporations, Small-Medium Enterprises, Organizations and Universities. One of the main sectors of activity focuses on addressing the financial world which, through new operating models, through a global ecological vision that places man at the center, must promote the social economy and the universal common good.

Today there is a clear global interest in new technologies and practices and demand for sharing experiences between countries of all income levels. We are now facing key challenges in the transition to solutions that are well suited to address people and companies all over the world allowing them to consider policy frameworks and market systems. Technological advances and societal changes have triggered a drastic evolution. Spreading the cardinal themes that the world is experiencing and raising awareness of the people of the world is the main mission of IC organization.

We live in times when the economy, directly and indirectly, dictates the rules of co-existence of the people and peoples. Economic indicators increasingly influence the destinies of nations and Economic evaluations, with its current metrics, condition the destinies of each state, heavily influencing its political and government choices. Everything moves according to the logic of an economy that imposes its laws and values but the economy today is under the yoke of finance. Finance that has lost its generativity and gained control of the economy and society must now have a universal conscience without speculation. Huge masses of money, with their hovering over the financial markets, decide the fate of businesses and nations regardless of the social, economic, political and natural context.

IC positions itself on the market in the field  
of consulting economics and finance,  
mainly developing four work areas.

New metrics  
and Financial  
Assessment for  
the Common Good:  
Values' Metrics

Investment  
Instruments  
to address  
Companies

Projects for the  
development  
of Corporate  
Business in the  
Real Economy

Energy and  
Environment

# VALUES' METRICS

## New metrics and Financial Assessment for the Common Good: Values' Metrics

Intelligent Cathedral Lda is promoting different meetings on new economic models and new metrics, between ethics and economics with the world of associations, the tertiary sector and industrial protagonists and a series of workshops with Social Security Funds and Pension Funds for the development of a sustainable financial system, identifying with Integral Ecology.

**We have created Metric's Values as an instrument to channel investments toward the companies that commit themselves to work for the common good as a promotion of health and well being.**

**We have developed a Platform to promote Metric's Values at a global stage** as a measurement and a validation tool for the implementation of ESG and SRI criteria. The main goal is to create sustainable investment opportunities in compliance with these principles and to develop national and international businesses.

**We have conceived a new financial fund** for institutional investors (pension & social funds, banking institutions and foundations, insurance companies) to better direct investment dedicated to the real economy in terms of sustainability and efficiency.

# Investment Instruments to address Companies

The creation of investment instruments and products inspired by religious principles and values allow sustainable and responsible finance. For this reason a rating and some sustainability standards are being studied for the relationship with Companies to generating impulse for an economy more attentive to man and his context by conveying Institutional Investors.

**Synergies with European SME Networks and with Business stakeholders in Northern and Southern America as well as in Asia.**

**Scouting for Investments Funds** according with ESG and PRI principles related to Metric's Values Instrument and the specific interest of each Fund.

Some examples:

- Green Energy;
- Agri-food & Innovation;
- Social Housing;
- Transport & Innovation;
- A.I. & innovative applications.

## **Projects for the development of Corporate Business in the Real Economy**

To the development of economic interdependence, the present world has not corresponded to a positive social correlation and therefore created enormous inequalities that increase with the growth in the real economy. It is necessary to compensate and limit the different types of inequality with international alliances, synergies of programs and international cooperation agreements, also to concentrate more financial resources on social, solidarity and ethical objectives.

Among new emerging companies it is very important to creating the right alliances in different markets; for this reason, we strongly are committed to better consolidate companies which can benefit more.

**Synergy with the European SME Business Club (ESBC)** to gradually build up a platform paving a way to Brussels for SMEs throughout Europe.

**Financial Advisory and Global Coordinator:** Structured Finance (Securitisation, Bond Issues), International M&A (Mergers & Acquisitions, Leveraged and Management Buyouts) and IPOs.

**Fundraising initiatives** to support activities and organizations with a strong social impact.

**European Commission Grants for ACP Countries** (Africa-Caribbean-Pacific) The objectives of development finance cooperation are, through the provision of adequate financial resources and appropriate technical assistance, to support and promote the efforts of African States. Caribe and Pacific Area to achieve the objectives set out in the Agreement based on mutual interest and in a spirit of interdependence.

# Energy and Environment

The dialogue on which the future of the planet is built leads to identify the necessary actions to resolve the consequences of environmental degradation to take on the best fruits of scientific research. IC is promoting a line of initiatives between companies for the sustainable development of Humanity.

**Synergy with SME to promote green business in Agriculture and food** in collaboration with the specific working group of SME Connect.

**Team building and Synergies** with the Dicastery of the Holy See (Integral Development) for the promotion of **Green Energy** Projects and Best Practices for the protection of the Earth.
